SYNTHETIX / PRODUCT TEST REPORT

RefillHK · v2-concept-demo

Run run-20261018-010810-d087 | Mode: concept

Value proposition: Monthly household cleaning-product refills in reusable bottles, with Basic at HK$268 per month and illustrative Kwun Tong delivery coverage.

Objective: Review the supplied concept from the authored household persona; identify questions to validate with real people. No browser interaction is performed.

Synthetic results are early signals. Validate important findings with real users.

Concept evaluation reviews supplied material. No product was operated; ease of use is not assessable.

Report quality note: Concept feedback recorded 2026-10-18 01:08 HKT. This example reviews supplied material only. No product interaction or browser task completion occurred.

Report quality note: This is one authored synthetic profile. Its feedback is an early signal for later validation with real users, not evidence of market demand.

Test coverage

Requested: 1. Completed: 1. Failed: 0. Cancelled: 0. Queued: 0. Running: 0.

Accounting check: passed

Audience: Authored example profile of a Hong Kong household decision-maker; not a representative sample. (spec pitch-concept-1).

Individual feedback only: one requested or completed synthetic user; no population shares are shown.

Product experience

Rating dashboard

Individual: run-20261018-010810-d087-u00001

Appeal: 4 of 5

Usefulness: 4 of 5

Ease Of Use: Not assessable: no relevant product task attempted

Trust: 3 of 5

Intention To Use: 3 of 5

Rating reasons: Appeal (4): the reusable-bottle monthly cleaning-refill model lines up with the persona's interest in cutting household packaging without adding chore friction, and the page-level framing is easy to grasp; the recurring monthly cost tempers rather than kills the appeal for a high-price-sensitivity household. Usefulness (4): the Basic plan supplies three refills (laundry, dish, multi-surface), reusable bottles and a scheduled monthly delivery, and the delivery page names Kwun Tong explicitly, which matches the persona's district and routine. Ease of use: not assessable — this is a concept review; T1 (find Basic price), T2 (Kwun Tong coverage) and T3 (start free trial) are all recorded as not_attempted, so no interaction evidence exists. Trust (3): the material is candid that it is an invented static prototype, takes no payment or registration, and makes no verified environmental impact claims, which supports credibility of the evidence itself, but nothing substantiates real service reliability, bottle-collection logistics or measured impact. Intention to use (3): hypothetical trial interest is mixed — the routine and district fit are relevant, but the recurring HK$268 outlay and the unproven practical value of the refill cycle would need clarifying before interest is more than exploratory.

Strengths: Directly serves reducing household packaging while keeping chores convenient via monthly refills in reusable bottles.; Delivery page explicitly names Kwun Tong and states 'Kwun Tong is covered', matching the persona's district.; Discloses that it is an invented static prototype, takes no payments and records no registration, and avoids unverified environmental impact figures.; Two clear tiers — Basic HK$268 per month and Family HK$398 per month — give a simple starting comparison.

Suggestions: Add a per-refill cost breakdown so a price-sensitive household can judge the HK$268 Basic plan against current cleaning-product spend.; Reconcile the delivery page's district-level list with the signup Region field, which offers only Kowloon, Hong Kong Island and New Territories.; State the free-trial length and what happens when it ends, even in a static concept.; Describe how bottle return and refill-preference changes would work in practice beyond the three-step overview.

Pricing feedback (observed price): Literal price evidence supplied: HK$268 per month for Basic and HK$398 per month for Family. For a high-price-sensitivity household, the recurring monthly outlay is the central question, so the concept would need value-per-refill and comparison with existing household spend before trial interest could be validated with real people.

Market attractiveness

Read the individual's appeal and intention-to-use ratings above. One simulated response does not establish a market pattern.

Segment results are unweighted synthetic signals; they do not measure conversion or predict demand.

Improvement backlog

No grouped findings have been generated. Individual feedback and task evidence remain available.

Next validation

Suggestion — Validate with real users: observe core tasks and ask participants to explain their decisions.
